Initial testing results indicated an anticipated shielding effectiveness of >50dB from 100kHz to 1GHz

Three levels of EMI / EMC / EMP shielding plus an environmental gasket provide redundant protection for diverse operating environments using COTS (commercial off the shelf) technology. 4.8mm thick, welded aluminum walls provide a rugged shell that is lightweight for use in the field. Intergrated handles and casters for easy transportation. Optional ferrous lining provide additional protection from strong magnetic fields.

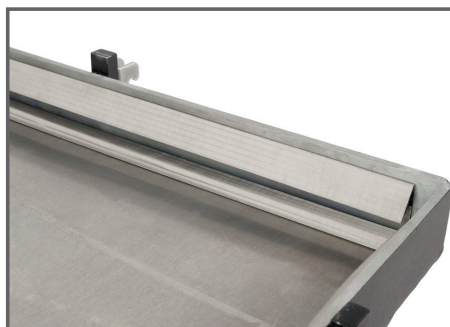

Standard interior volume is 444.5 mm wide x 393.7 mm deep x 342.9 mm tall. Custom sizes and options such as robust tie downs and lifting points are quickly deployed.
